

IN THE CLAIMS:

Claims 1, 10, and 19 have been cancelled without prejudice or disclaimer to the subject matter contained therein.

The claims have been amended as follows:

2. (Amended) The method of claim 32 [1], wherein the [first] digital image [information] is a digital photographic image [information].

3. (Amended) The method of claim 33 [1], wherein the at least two of a plurality of different sources include a photo editing application, a digital device interface application, and a shell extension.

4. (Amended) The method of claim 32 [1], wherein the [second digital image] ordering information includes pricing and merchandise availability.

5. (Amended) The method of claim 32 [1], wherein the external network entity includes at least one of a server, photofinishing lab and third party fulfillment house.

6. (Amended) The method of claim 32 [1], wherein the image-related service generates at least one of [photographic products include] photographs and merchandise with photographs imprinted thereon.

7. (Amended) The method of claim 32 [1], wherein [further comprising:]
said step of uploading delays [delaying the outputting of] uploading the [first] digital image [information] until an [the] order for a plurality of digital images is complete.

8. (Amended) The method of claim 32 [1], further comprising:
checking the [first] digital image [information and the second digital image information] for image quality.

9. (Amended) The method of claim 33 [1], wherein the at least two of a plurality of different sources include a photo editing application, a digital device interface application, a shell extension, and the external network entity.

11. (Amended) The computer program of claim 37 [10], wherein the [first] digital image [information] is a digital photographic image [information].

12. (Amended) The computer program of claim 38 [10], wherein the at least two of a plurality of different sources include a photo editing application, a digital device interface application, and a shell extension.

13. (Amended) The computer program of claim 37 [10], wherein the [second digital image] ordering information includes pricing and merchandise availability.

14. (Amended) The computer program of claim 37 [10], wherein the external network entity includes at least one of a server, photofinishing lab and third party fulfillment house.

15. (Amended) The computer program of claim 37 [10], wherein the image-related service generates at least one of [photographic products include] photographs and merchandise with photographs imprinted thereon.

16. (Amended) The computer program of claim 37 [10], wherein the [output] uploading code segment delays [the outputting of] uploading the [first] digital image [information] until an [the] order for a plurality of digital images is complete.

17. (Amended) The computer program of claim 37 [10], further comprising:
a checking code segment for checking the [first] digital image [information and the second digital image information] for image quality.

18. (Amended) The computer program of claim 38 [10], wherein the at least two of a plurality of different sources include a photo editing application, a digital device interface application, a shell extension, and the external network entity.

20. (Amended) The computer signal of claim 41 [19], wherein the [first] digital image [information] is a digital photographic image [information].

21. (Amended) The computer signal of claim 42 [19], wherein the at least two of a plurality of different sources include a photo editing application, a digital device interface application, and a shell extension.

22. (Amended) The computer signal of claim 41 [19], wherein the [second digital image] ordering information includes pricing and merchandise availability.

23. (Amended) The computer signal of claim 41 [19], wherein the external network entity includes at least one of a server, photofinishing lab and third party fulfillment house.

24. (Amended) The computer signal of claim 41 [19], wherein the image-related service generates at least one of [photographic products include] photographs and merchandise with photographs imprinted thereon.

25. (Amended) The computer signal of claim 41 [19], wherein the [output] uploading segment delays [the outputting of] uploading the [first] digital image [information] until an [the] order for a plurality of digital images is complete.

26. (Amended) The computer signal of claim 41 [19], further comprising:
a checking segment for checking the [first] digital image [information and the second digital image information] for image quality.

27. (Amended) The computer signal of claim 42 [19], wherein the at least two of a plurality of different sources include a photo editing application, a digital device interface application, a shell extension, and the external network entity.

28. (Amended) A network photo print system, comprising:

a user station, capable of running

a camera/scanner applications program for supplying first image data to the user station,

a photo editing applications program for supplying second image data to the user station,

an operating system, including an operating system desktop shell interface and an extension to the operating system desktop shell interface, the shell extension supplying third image data to the user station, and

a network access protocol module capable of receiving any one of the first, second, and third image data, receiving order and merchandise availability information from an external network entity; processing an order based on any one of the first, second, and third image data, and outputting any one the first, second, and third image data;

a network sales/order processing server for receiving the order and for receiving any one the first, second, and third image data image data from the user station after receiving the order; and

a photofinishing lab for producing photographic-quality prints images based on the order and any one the first, second, and third image data from the network sales/order processing server.

29. (Amended) The network photo print system of claim 28, wherein said network access protocol module delays the outputting any one the first, second, and third image data to said network sales/order processing server until the order for a plurality of images is complete.

New claims 32-48 have been added.
